

HOŞGELDİNİZ

Atatürk Üniversitesi olarak 5-8 Mart 2018 tarihlerinde Türkiye'nin Erzurum şehrinde gerçekleştirilecek 1. Uluslararası Koruyucu Diş Hekimliği Kongresi'ne ev sahipliği yapacak olmaktan büyük onur duyuyoruz. Hem Erzurum sakinleri hem de Üniversite olarak bu Kongreyi düzenlemek ve tüm dünyadan katılımcıları güzel ülkemizde gerçekleştirilecek bu etkinlikte görmek bizim için bir ayrıcalık olacaktır.

Atatürk Üniversitesi Diş Hekimliği Fakültesi 45 yılı aşkın bir süredir eğitim vermektedir ve birçok başarılı etkinliğe ev sahipliği yapmıştır.

Bilimsel ve akademik düzeyde bir etkinlik olan Kongre aynı zamanda, dünyanın dört bir yanından gelecek katılımcılar arasında yeni bir sinerji yaratacak bir platform olacaktır.

Kongre kapsamında, dünya çapından konuşmacıların ve komitelerin desteğiyle gerçekleştirilecek üst düzey bir bilim programı planlanmıştır. Oturumlarda, Koruyucu Diş Hekimliğine dair önemli konular ele alınacak, konuşmacılar bu alandaki bilgilerini katılımcılarla paylaşacaktır.

Sizleri, Koruyucu Diş Hekimliğine yönelik bu bilimsel platformda ve etkinlik tarihinde kayak sporu da yapabileceğiniz Erzurum Palandöken Dağı'nda aramızda görmekten büyük mutluluk duyacağız.

Erzurum'da buluşmak dileğiyle!

Saygılarımla,

Prof. Dr. Taşkın GÜRBÜZ
ICPD Başkanı

WELCOME MESSAGE

Erzurum Atatürk University has the great honor of hosting 1. International Congress on Preventive Dentistry in Erzurum, Turkey, in 5-8 March 2018. It is a privilege for Erzurum and our University to organize this Congress and welcome you all to our beautiful country, where we will be looking forward to hear that you have booked this date to attend this wonderful Congress for Preventive Dentistry worldwide.

Atatürk University Dentistry Faculty is over 45 years old and has a long tradition of hosting successful events. We are organizing not only a successful congress in scientific and academic level, but also suggesting a new synergy among the attendees from all over the world. A high-level scientific program has been planned, with the support of our invited speakers and committees from all over the world. Speakers will share their knowledge and be covering the important topics in preventive dentistry.

We hope you will join us in Erzurum, at the Palandöken Mountain at the right time for skiing and scientific environment for preventive dentistry field.

See you all in Erzurum!

Sincerely yours,

The clinical use of fluorides for the prevention of dental caries in children
"The clinical use of fluorides for the prevention of dental caries in children".
Professor Jack Toumba, Paediatric Dentistry, School of Dentistry, Leeds, U.K.

The mainstay of preventive measures are the judicious use of fluoride (F), plaque control, fissure sealants and sensible dietary advice. It is the activity of the fluoride ion in the oral fluid that is of most importance in reducing the solubility of the enamel rather than a high content of fluoride in enamel. This is now the most widely accepted view of the role of fluoride in the prevention of dental caries. Fluoridated toothpastes have had the greatest impact on combating dental caries, which has declined dramatically since their introduction in the early 1970's. There are numerous different toothpaste formulations with differing fluoride concentrations for use by children and adults. Fluoride is also available clinically in tablets and drops, gels, rinses, varnishes and on a community level in water, salt and milk. Cochrane reviews have proven the clinical effectiveness of many clinical fluoride products. The latest fluoride research is investigating the use of slow-release devices for the long term intra-oral provision of fluoride. F over-dosage leads to acute and chronic toxicity. Today the use of fluoride dental products are as safe as can be and this presentation will discuss these issues and highlight the safe use of fluoride in Paediatric Dentistry.

Dr. Svante TWETMAN

Caries prevention beyond fluoride – biofilm control with pre- and probiotics
Svante Twetman, Department of Odontology, Faculty of Health and Medical Sciences, University of Copenhagen, Denmark
Abstract

Recent insights concerning the importance of a balanced and diverse microbiome in oral biofilms for the maintenance of health have brought a novel concept to dentistry; biofilm control rather than plaque eradication and restorative care. Therefore, the interest in using prebiotic agents and probiotic bacteria for the management of oral diseases has emerged in recent years, although the exact mechanisms of action are still unknown. The lecture will provide a brief background on the role of oral biofilms in health and disease and the potential role of prebiotics, such as arginine, and beneficial bacteria to prevent dysbiosis. The main vehicles for administration are toothpaste, dairy products or tablets/lozenges/drops. Clinical trials have shown that arginine can moderate the composition of the oral biofilm and boost the caries-preventive of fluoride in children and elderly. Systematic reviews have also displayed good evidence of an antagonistic role for probiotic lactobacilli and bifidobacteria against salivary mutans streptococci, while the effect on lesion development is controversial. Probiotic interventions early in life seem particularly promising since the timing and sequence of exposure to beneficial and harmless bacteria has a strong influence on the composition and development of the oral biofilm. Thus, based on 8 prospective trials, the preventive fraction for early childhood caries is calculated to 33%. Other trials have reported beneficial effects on gum health such as plaque index, bleeding on probing, pocket probing depth, subgingival microbiota, salivary IgA and pro-inflammatory cytokine levels in gingival crevicular fluid. Collectively, current research suggests a role of probiotic supplements as adjunct to the existing "best clinical practice". No dramatic adverse effects have been reported but the optimal dose, timing and mode of delivery, remains to be established.

Dr. Timuçin ARI

Early Intervention for Prevention and Improving Oral Function
The recommended time for a child's first dental visit should be no later than first year of life. Advances in understanding the factors affecting child development, especially early weeks of infant life suggests that first year dental check up may be too late for some babies. Problems such as breastfeeding, sleep apnea and early childhood caries have huge impact on babies and families. These problems can be managed through counseling, early intervention and working as a team with other health care providers. It is essential that pediatric dentists must be well acquainted with and capable of diagnosing all possible pathologies occurring during this early period of life. In my presentation, I will be talking about early interventions, mostly infant frenectomies and it's impact on feeding, oral function and prevention of dental disease.

Prof. Ahmad M. HAMDAN

Preventive Orthodontic Treatment
Preventive orthodontic treatment is mainly carried out in the mixed dentition for functional, dental health and psychosocial reasons. Treatment is simple, of short duration and yields the maximum benefit to the patient. In many instances, such treatment can be carried out by the General Dental Practitioner with the supervision of an Orthodontist. This lecture will discuss the various malocclusions that would benefit from preventive (interceptive) orthodontic treatment and the supporting evidence for such treatment. A group of clinical cases where successful preventive orthodontic treatment has been carried out will be illustrated and discussed.

Modulation of osteoclast behavior: Lessons from periodontal disease and tumour microenvironments

Abstract:

Bone-resorbing osteoclasts are multinucleated motile cells derived from haemopoietic stem cells during a multistep differentiation process. Bone marrow-derived osteoblastic stromal cells play an important role in modulating the differentiation of osteoclast progenitors by secreting soluble factors, and through signalling by cell-to-cell contact. This dogma has been now overwritten by numerous supporting cells that contribute several local factors as well as systemic hormones that support proliferation of osteoclast progenitors, differentiation into mature osteoclasts and promote their survival. Though once classified into three categories in terms of the signal transduction: vitamin D receptor-mediated signals [$1\alpha,25(\text{OH})_2\text{D}_3$]; protein kinase A-mediated signals (PTH, PTHrP, PGE₂, and IL-1); and gp130-mediated signals (IL-6, IL-11, oncostatin M, and leukaemia inhibitory factor), now the list goes endless as new candidates such as tumour-secreted trophic factors, microbial-derived antigens and some immune cells, such as T-cells have been discovered to influence osteoclastogenesis. Majority of these osteoclast-inducing factors appear to act indirectly by inducing osteoblasts to secrete osteoclast differentiation factor (RANKL), which recognizes osteoclast progenitors and prepares them to differentiate into mature osteoclasts. But studies have shown that direct stimulation of osteoclast progenitors locally by cell-to-cell contact from tumour cells, microbial cell wall derived-antigens, can also trigger differentiation and bone destruction. As for tumour microenvironment, osteoclastic bone resorption promotes release of numerous growth factors (like TGF beta, FGF, IGF, PDGFs) from bone matrix which further stimulate tumour growth ensuing a vicious cycle of mutual dependency. And in the case of periodontal disease, inflammation and bone loss stand as hallmarks. Accumulated evidence demonstrates that periodontal disease involves microbially derived factors and antigens that stimulate local inflammatory reaction and activation of the innate immune system. Proinflammatory molecules and cytokine networks come into play where antigen stimulated lymphocytes (B- and T-cells) take the lead. These novel studies provide undoubtedly new ways to treat several metabolic bone diseases caused by abnormal osteoclast recruitment such as osteoporosis, osteopetrosis, cancer-induced osteolysis, Paget's disease, rheumatoid arthritis, and periodontal disease.

Preventive planning for long term stability in esthetic implantology

Aesthetics in dentistry as considered to be a dilemma for many reasons. The leading difficulty is that having consensus or evidence based results are as the main results are based on experts experience and patients satisfaction. In this perspective implant restorations on aesthetic area are restored with same principals coming from tooth born restorations. There are numerous modifications to be considered when it is to be an implant restoration. Starting from surgery, peri-implant tissues and prosthetic steps ; all stages are advised to be modified at the treatment planning session.

Implant dentistry has changed trough years of history and following case series will show how these changes reflected in our clinical bases.

Reading patient expectations takes the priority in aesthetic implantology. In order to achieve aesthetics in implantology bone and soft tissues must be considered with same importance as prosthetics. As a result, thinking in 3-D will improve outcomes of the restorations.

Discussion on high – cited recently published papers will be mentioned, as advanced to complex case series of prosthetic restoration will be presented.

Non invazive treatment plan for children with MIH

Başak Durmuş

Marmara Üniversitesi Dişhekimliği Fakültesi Pedodonti AD

Distinct from other developmental defects of enamel, MIH presents with demarcated, qualitative defects of enamel, atypical cavities and post eruptive breakdowns of systemic origin affecting one or more first permanent molars (FPMs) with or without incisor involvement. In children with MIH, daily life is negatively affected by the pain and tenderness of the permanent first molar teeth.

Especially frequent failures of the restorations at molar teeth and frequent dental appointments causing anxiety in children. The problem is mainly aesthetic and sensitivity in the affected anterior teeth. Early diagnosis of MIH is important because when parents are informed about its clinical situations and preventive care is implemented in a timely manner the teeth with MIH are kept in the mouth for a longer time. Therefore, in the content of the presentation; possible methods of reducing the need for restorative treatment, treatment of opacities in the anterior teeth, selective caries removal and self adhesive restoration applications will be discussed.

A New Anaesthesia Technique in Child Dentistry

Sertaç Peker & Figen Eren

Marmara University Dentistry Faculty, Pediatric Dentistry Department

Anxiety and pain control in the treatment of pediatric patients is the first and most important condition of treatment success. Local anesthesia should be applied to the children before every dental procedure in which the child may have pain. Both the image of the needle and the medical experiences that have been experienced before, or whether the pain of the children under the consciousness creates a fear against the dentist. The most important factor that is frequently encountered in childhood and causes difficulties in the treatment is pain and needle fobia during local anesthesia procedures. One common cause of needle fears in adult patients is the negative dental treatment experience experienced during childhood. It should be remembered that painless local anesthesia can be performed in childhood only if effective local anesthesia technique is applied successfully with effective psychological approach. Traditional local anesthesia systems can cause dental anxiety in children. For this reason, parallel to technological developments, new needle-free and painless LA techniques are being developed. With the development of needle-free injection systems, the patient's needle phobia and dental anxiety are inhibited. In this seminar, successful local anesthesia methods and a new needle-free local anesthesia technique will be discussed in children by the authors.

O - 0152 - Osteoarthritic Changes of Temporomandibular Joint Related to Age and Gender: A Retrospective Study

Alaettin Koç, **Ruşen Erdem**

17:10-17:20

O - 0087 - Prevalence and characteristics of pneumatization of the articular eminence and glenoid fossa evaluated by cone beam computed tomography in Turkish population

Gülay Altan Şallı, Ilknur Özcan, Filiz Namdar Pekiner

17:20-17:30

O - 0335 - A Retrospective Evaluation of Compound Odontomas

Elif Bilgir

17:30-17:40

O - 0291 - Effect of Dentin Desensitizers on Shear Bond Strength of Adhesive Resin Cement to Dentin

Mehmet Uğur, İdris Kavut

17:40-17:50

O - 0412 - Effects of Sodium Thiosulfate on Bond Strengths of Resin Cement to Endodontic Surfaces

Ezgi Doganay Yıldız, Hakan Arslan, Gizem Tas, Ertugrul Karatas, Merve Iscan Yapar, Alper Ozdogan

17:50-18:00

O - 0118 - Changes in Chemical Composition of Enamel Submitted to Acid Attack After Bleaching

Çiğdem Atalayın, Hüseyin Tezel

18:00-18:10

O - 0092 - Responses of L929 Mouse Fibroblasts to contemporary self adhesive restorative materials
Türkey Kölüş, Hayriye Esra Ülker

18:10-18:20

O - 0107 - Micro-leakage evaluation of self-adhering flowable composites in class V cavities prepared by different methods
Serdar Bağlar

18:20-18:30

O - 0501 - Evaluation of periodontal disease self-report validity of patients attended to Ankara University Faculty of Dentistry
Fatma Karacaoğlu

POSTER SESSIONS

Poster Session 3 (09:30-13:00)

Chair: Başak Durmuş

P – 0229 - Influence of polishing techniques on the surface roughness of hybrid CAD/ CAM materials
Aysegul Kurt

P – 0057 - Effect of a New Toothpaste Containing Ginger on Early Enamel Lesions
Esma Türkmen, **Dilek Tağtekin**, Funda Yanıkoğlu, Şaban Aktaş

P – 0117 - Effect of demineralization time on hardness and depth of an enamel caries lesion: an in vitro study
Melek Öztaş, **Funda Yanıkoğlu**, Zeynep Ceren Pehlivan Çelik, Dilek Tağtekin

P – 0216 - Evaluation of effective duration of different cleanser tablets providing prosthetic hygiene care on some denture base resins

Hacer Sahin Aydınyurt, **Cem Taskin**

P – 0442 - The evaluation of effect of MTA- Caps and Pro Root MTA on human pulp cell viability
Cemile Kedici Alp, Ferda Alpaslan Pınarlı, Yunus Alp, İhsan Yıkılğan

P – 0275 - Effects of Diode Laser Irradiation on Dental Pulps in Rats
Cigdem Guler, Hilal Alan, Pinar Demir, Nigar Vardi

P – 0370 - Cone-Beam Computed Tomography Exploration and Treatment of Impacted Mesiodens
Deniz Sıla Özdemir, Ahmet Altan, Halenur Altan

P - 0065 - Perhaps, there is a last chance before extraction
Özgür Doğan, **Edanur Gökçe Meydan**, Suat Serhan Altıntepe Doğan, İsmail Haktan Çelik

P – 0233 - Treatment of tooth discoloration after endodontic treatment: 6-month follow-up
Elif Akkol, Esin Özlek

P – 0214 - Dosimetric Evaluation of the Effect of Dental Restorative Materials in Head and Neck Radiotherapy
Elif Aybala Oktay, Tamer Zerener, Bahar Dirican, Selda Yıldız, Ömer Sağsen, Serpil Karaoğlanoğlu, Murat Beyzadeoğlu

P – 0063 - Investigation of Mineral Content of Root Canal Dentin After the Application of Various Antibiotic Paste Using Energy-Dispersive X-Ray Detector
Hüseyin Şimşek, Münevver Kılıç, Fatih Çakıcı, Funda Fundaoğlu Küçükekenci, **Elif Bahar Çakıcı**, Taşkın Gürbüz

P – 0433 - Digitalization of Impression in Dentistry **Emine Ünal**, Faik Tuğut

P – 0209 - The effect of placebo, intracanal diode laser application and low level laser therapy on the change of total amount of CGRP in gingival crevicular fluid: split mouth study design
Hakan Arslan, Serhat Koseoglu, **Ezgi Doganay Yildiz**, Taner Arabacı, Levent Savran, Dursun Anil Yildiz, Gözde Veyisoğlu

P – 0409 - Treatment of a dental midline deviation with orthodontic mini screw anchorage: case report
Orhan Çiçek, Nurhat Özkalaycı

P – 0210 - The effect of low-level laser therapy on total amount of substance P in gingival crevicular fluid: Placebo controlled randomized clinical trial
Ezgi Doganay Yildiz, Hakan Arslan, Serhat Koseoglu, Taner Arabacı, Dursun Anil Yildiz, Levent Savran

P – 0411 - Use of Negative Apical Pressure Technique for Removal of Extruded Gutta-percha Fragment
Hakan Arslan, **Ezgi Doganay Yildiz**, Ertugrul Karatas

P – 0061 - Spectrophotometric analysis of discoloration and intracoronal bleaching after use of different antibiotic pastes
Funda Fundaoğlu Küçükekenci, **Fatih Çakıcı**

P – 0098- The perception of young adults about the influence of tooth loss on their quality of life
George Ion, Rodica Luca, Stefan Milicescu

P – 0083 - Effect of Multi-Walled Carbon Nanotube Incorporation to Glass Ionomer Cements on Surface Roughness and Microhardness: A Pilot Study
İdil Akmeriç, Elif Sungurtekin Ekçi

P – 0206 - Hygiene applications in implant prostheses
Bilal Holoğlu, **İşıl Sarıkaya**

P – 0134 - The occluso-prosthetic concept in implantology
Mahchouche Hafida, Boukais Hamid, Zenati Latifa

P – 0280 - An investigation of shear bond strength on caries affected dentin surface
Merve Agaccioglu, Emine Sirin Karaarslan, Fatma Aytac

P – 0304 - Influence of different light-curing units on monomer elution from bulk fill composites
Muhammet Karadaş, Ömer Hatipoğlu, Havva Er, Emine Akyüz Turumtay

P – 0143 - Efficacy of diode laser in management of oral Lichen Planus
Müge Çına Aksoy

P – 0402 - The stress distribution evaluation of two different post types which used in complicated crown-root fractures with finite element analysis
Abdullah Emre Karaali, Mehmet Sinan Doğan, **Osman Ataş**

P – 0437 - Labial Movement of Palatopositioned Anterior Teeth with Fiber Post Systems
Rabia Bozbay, Mehmet Uğur, İdris Kavut

P – 0449 - Regional Tooth Agenesis Associated With Syndactyly-Clinodactyly and Tongue Anomaly:A Case Report
Zuhail Kirzioglu, **Ruya Alpar**

P – 0185 - Relationship between metabolic disorder and dental anomaly
